

# VEDANSH RAJ

DevOps & Cloud Platform Engineer | Reliability & Automation

+91 6200807821 • bedanshsrivastava123@gmail.com • vedanshs.vercel.app • github.com/vedanshji

4+ YEARS IN IT & CLOUD ENGINEERING • 8 CLOUD CERTIFICATIONS • MULTI-CLOUD: GCP, AWS, AZURE

## PROFESSIONAL SUMMARY

DevOps & Cloud Platform Engineer with **4+ years in IT and cloud infrastructure**, including nearly 3 years focused on multi-cloud infrastructure as code (Terraform), Kubernetes and CI/CD reliability across Azure, AWS and GCP. Reduces manual toil through pipeline automation and ML-based anomaly detection, and provisions standardized GCP environments with Terraform. Built **EcoOps**, a carbon-aware, self-healing CI/CD framework that uses unsupervised ML to detect pipeline anomalies and remediate them automatically.

## TECHNICAL SKILLS

|                   |                                                                                                      |
|-------------------|------------------------------------------------------------------------------------------------------|
| IaC & Containers  | Terraform • Ansible • Chef • Puppet • Docker • Kubernetes                                            |
| Cloud             | GCP • AWS • Azure                                                                                    |
| CI/CD             | GitHub Actions • Jenkins • Codefresh • Git • GitHub • Scripting                                      |
| Observe & Respond | Prometheus • Grafana • Datadog • CloudWatch • Cloud Monitoring • ELK • Splunk • PagerDuty • Opsgenie |
| DevSecOps         | Workload Identity (OIDC) • IAM • Secret Manager • Palo Alto                                          |
| AI / ML           | scikit-learn • Anomaly Detection • Self-Healing Systems • Generative AI • Predictive Automation      |
| Languages & Data  | Python • Java • Linux • SQL • SQL Workbench • Data Studio • Postman                                  |
| Systems           | Hyper-V • Failover Clustering • Group Policy • Azure AD • DNS & DHCP                                 |
| Ways of Working   | Agile • ITIL • Jira • FinOps • RCA • Incident Triage                                                 |

## EXPERIENCE

DevOps Engineer | Wipro Oct 2023 – Present

- Reviewed and validated pull requests submitted by engineering teams, auditing code and plan outputs against security guardrails before merging to the main branch to ensure zero-drift, reliable GCP deployments.
- Provisioned and managed enterprise GCP cloud infrastructure, standardizing project hierarchies, VPC networking, and least-privilege IAM roles.
- Served as a core engineer in the Kubernetes squad, managing multi-tenant cluster resources via Terraform to automate namespace provisioning, tune ResourceQuotas/limit ranges, and resolve runtime pod scheduling bottlenecks across GCP environments.
- Troubleshoot core GCP infrastructure incidents across VPC routing, Compute Engine VMs, and IAM authentication, **reducing MTTR by 30%**.
- Conducted FinOps cost reviews across GCP workloads, eliminating orphaned resources and rightsizing compute to achieve a **20% cloud spend reduction**.
- Engineered platform automation prototypes including automated pipeline rollbacks, ChatOps bots, and AI-assisted triage tools to eliminate **10+ hours of weekly toil**.

Server Administrator | Wipro Aug 2022 – Sep 2023

- Administered enterprise hybrid server fleets across Linux and Windows Server, configuring DNS, DHCP, Active Directory, and Group Policy Objects (GPO).
- Maintained high-availability server clusters (Hyper-V, Failover Clustering), resolving critical P1/P2 production incidents with **zero downtime**.

## PROJECTS

EcoOps | Carbon-Aware, Self-Healing CI/CD Pipeline B.Tech Dissertation, BITS Pilani • Jan – Jun 2026

- Four-layer CI/CD framework on GCP** that ingests real-time carbon intensity data (Electricity Maps API, Google Carbon Footprint API) and schedules workloads in low-emission windows, picking the lowest-carbon GCP region via Terraform at build time.
- Unsupervised anomaly detection** (scikit-learn IsolationForest) across six pipeline health metrics, feeding a self-healing engine with three remediation modes (Immediate, Deferred, Lean Heal) that factors carbon cost into healing decisions.
- Grafana + Prometheus dashboard** for real-time emissions and MTTR tracking; keyless Workload Identity Federation (OIDC) for GitHub Actions to GCP.
- Validated end-to-end automated deployment workflows on GCP Cloud Run using event-driven Cloud Build triggers, maintaining zero secret exposure via keyless OIDC authentication.

## CERTIFICATIONS (8)

|                    |                                                                                        |
|--------------------|----------------------------------------------------------------------------------------|
| Google Cloud       | DevOps Engineer • Associate Cloud Engineer (ACE) • Generative AI L3 • Machine Learning |
| AWS                | Certified Solutions Architect • Certified Cloud Practitioner                           |
| Microsoft / GitHub | Azure Fundamentals (AZ-900) • GitHub Actions (CI/CD Automation)                        |

## EDUCATION & AWARDS

|                                                  |                                                                                                                       |          |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|----------|
| B.Tech, Information Systems                      | — BITS Pilani                                                                                                         | Pursuing |
| Diploma, Electronics & Communication Engineering | — Government Polytechnic, Ranchi                                                                                      | 2019     |
| Awards                                           | Multiple Excellence Awards for outstanding performance in client: Canara HSBC Life Insurance, AIC of India, ANZ Bank. |          |
